

Daniel Gynn

Senior Software Engineer

ABOUT

Hey there — I'm a senior software engineer based in London with over eight years of professional experience building products for start-ups, with a degree in computer science.

I have experience across the stack, but I mostly specialise in frontend technologies, including React, TypeScript, Redux (RTK), Next.js, and GraphQL.

I have experience leading frontend teams, as well as working as a senior individual contributor. I have a strong principle of user-first design when finding solutions to a problem, which helps me to keep a bigger-picture mindset when planning frontend architecture.

Outside of work, you can usually catch me running, reading, or wandering around [taking photographs](#).

WORK EXPERIENCE

Founding Software Engineer

Hyphen

Mar 2021 - Present / London, UK

Built an interactive and playful e-learning platform for early-career talent, as part of a small founding team. Solely responsible for building the frontend architecture and components, while contributing to the backend and microservices.

Next.js, React, TypeScript, GraphQL, Context API, Edge functions, React Testing Library, Storybook, Chakra UI

Lead Frontend Engineer

Atellio

Apr 2021 - Feb 2023 / London, UK & Remote

Built resource and project management software for creative teams as part of a small team, at first as an individual contributor and later as the frontend team lead. Worked closely with the design and product team to plane and scope features.

React, Typescript, Redux Toolkit, Go, gRPC, Storybook, React Testing Library, Sass

Lead/Senior Frontend Engineer

Filament AI

Jul 2017 - Mar 2021 / London, UK

Helped build knowledge management dashboards, powered by AI, for clients in both a product and solutions capacity. Worked closely with the client-delivery team to design and build solutions and product features to match requirements.

Responsibilities include frontend architecture design, creation and maintenance of the FilamentUI component library, team management and mentoring within the frontend squad.

React, Node.js, Styled Components, Redux, React Testing Library, Storybook, TypeScript

Freelance Frontend Engineer & Product Designer

TheMSAG

2020 - 2021 / Freelance

Designed and built an online education platform to help students applying to medical school pass their exams, including an exam simulator and detailed dashboard highlighting educational progress. Worked closely with the client to turn user requirements into wireframes, and then built out the entire frontend architecture alongside one other colleague.

React, Node.js, Styled Components, Redux Toolkit, React Testing Library

Frontend Developer

Repositive

Aug 2015 - Jun 2017 / Cambridge, UK

Joined as a junior web developer and moved into a mid-level frontend role. Helped build a search platform for genomic research data with complex filtering.

Ember.js, Node.js, Jest, Sass

SIDE PROJECTS

Plantae

Mobile-first web application to give you care reminders for your houseplants, based on their individual specific needs.
